## TRANSPARENCY MAKES ONLINE DATING BETTER!

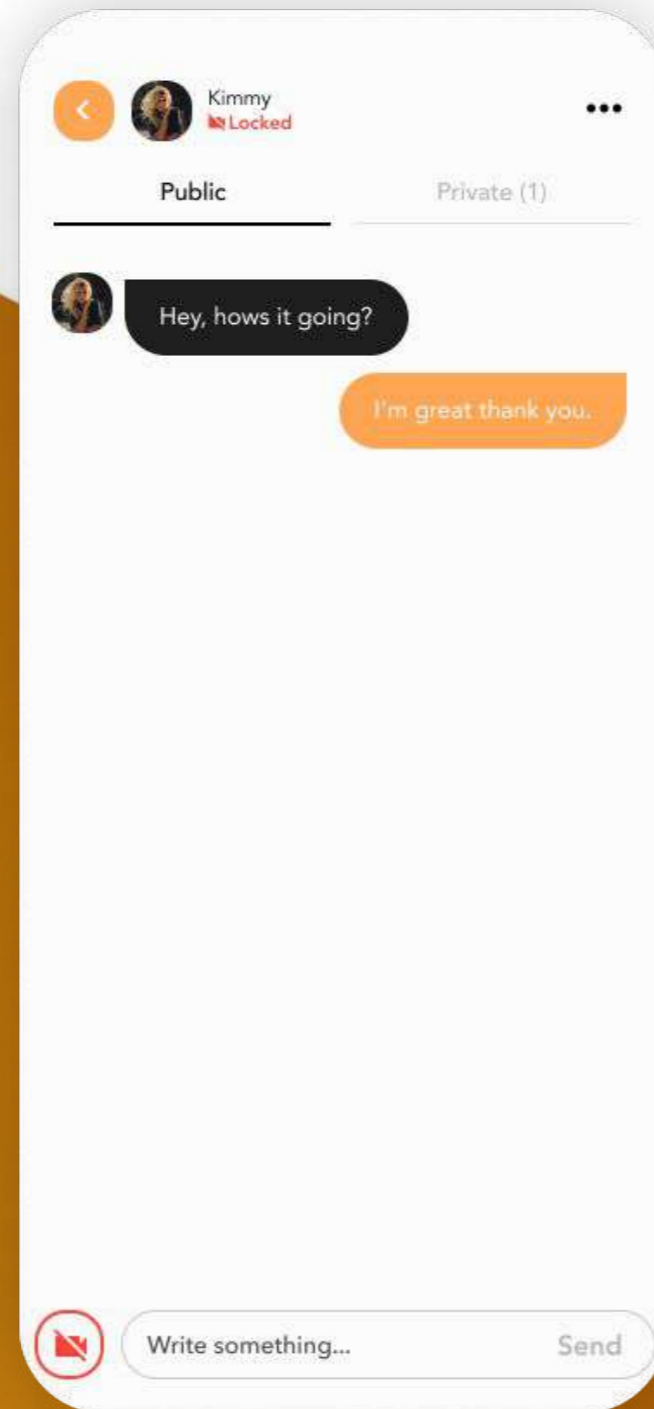

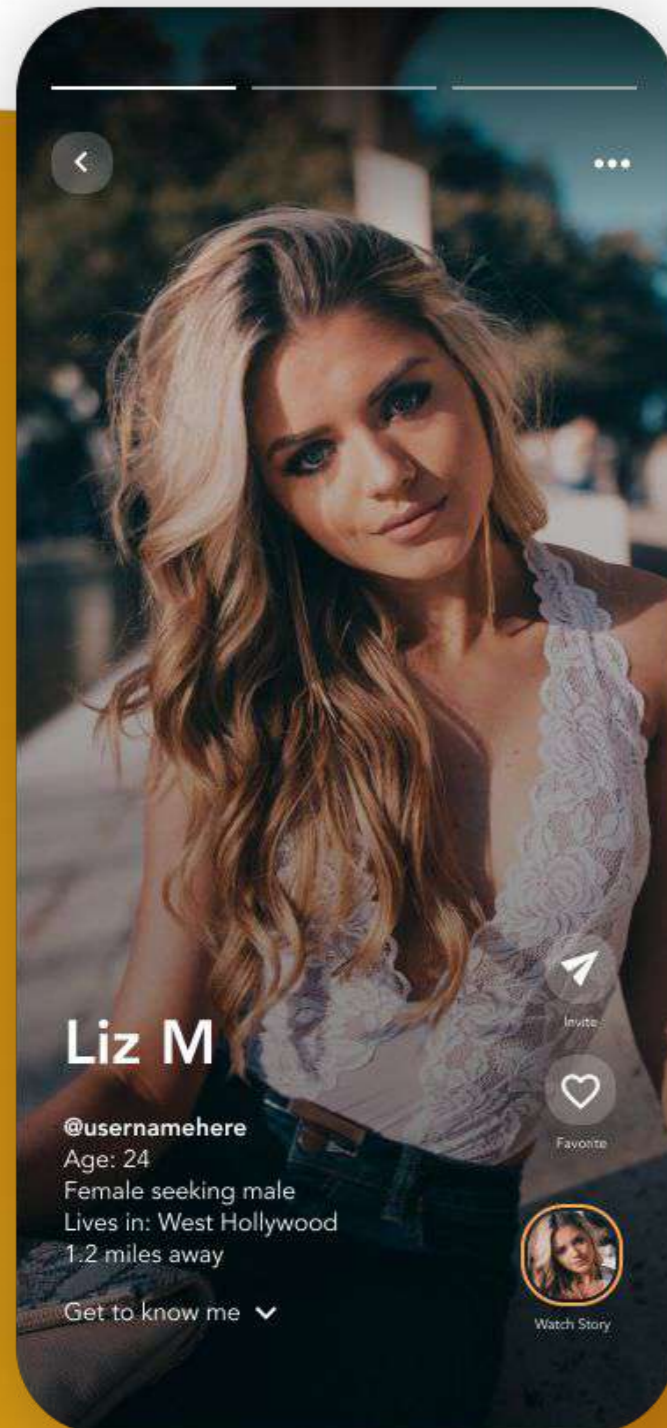

# Customer Overview

Dating app with a difference: Transparency.

That means when you check out a profile, you get to see their past text chats and video conversations with other daters! We know this sounds wild.

## Problem Statement

There are three great reasons why transparency makes for a better dating app experience:

1. The transparency of Dating app makes for a safer, more respectful crowd.
2. That means fewer players, less catfishing, less ghosting.
3. You can 'vibe check' other daters before you say hello, which means finding people you actually like!

## Our Solution

---

An existing Swift app is being rebuilt by Linkites in React Native. A complete RN app currently undergoing development.

Since we had to handle a specific user record in both the databases, php and mongo, managing user data was a critical task and significant responsibility especially with our live users.

With the help of a third-party client SDK called Agora, we are currently working on establishing Chat, Audio and Video Calls amongst users.

The final phase of the development of our app is Agora integration, which is being worked upon by our development team.
